

Website Name: Local Happiness Construction

Website Description:

A website containing images and information about my father's business, Local Happiness Construction. This would contain different photo galleries of prior work and the ability to create tickets for him to view in order to free up his email and organize his workflow. It would also contain a customer review system

Website pages:

1. Homepage (Featured Images, reviews, branding)
2. About Us (Work experience, general contact information)
3. Galleries (Different sections for kitchens, bathrooms, landscaping, etc.)
4. Ticket creation page (Allows user to input their information to be sent in an organized manner to the admin panel)
5. Review Board (Allows users to submit a picture and a review of the work they've had done, this could either be approved for posting by the admin or a code system could be implemented that would allow the admin to give a code out in person)
6. Admin Panel (Allows an administrator account to view user tickets and upload new images to the site's galleries)

Website functions:

Consumer side:

- Displays images of completed work in an organized manner
- Allows for ticket creation to be viewed by those interested in having work done
- Displays review information about previous work and metrics for potential future work
- Allows for verified reviews to be posted in to boost credibility and maintain image

Admin side:

- Allows for editing photo galleries, adding new pictures, removing old ones
- A ticket board organized by time submitted
- Potentially review verification
